

Natural Woven Wood Shades

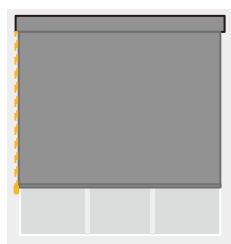

Every inch of the curtain surface is hand-woven, preserving the original texture. Through a double-layered hemp and grass design, it achieves a freely adjustable light-filtering rate of 40%-85%. It filters the intense summer sunlight while allowing breezes to pass through, maintaining a comfortable indoor temperature of 27°C. Each hand-knotted bump is a unique natural texture, serving as an ecological medium connecting the city and nature.
